To date, the program has helped over 30,000 Long Islanders with energy insecurities get through tough times.

History:

Project Warmth was first sparked in 1994 to help Long Islanders who did not qualify for Federal assistance
programs due to income guidelines. Emergency assistance programs that were already in place to address
year-long needs were often depleted by the end of the year, leaving many with nowhere to turn for help.
Since its inception, Project Warmth has helped to fill the need for emergency heating assistance on Long
Island, keeping families safe and warm.
